

DEVOPS FOR CLOUD COMPUTING

Assignment

Name:
Tehreem Mirza

Registeration No:
FA22-BSE-088

Section:
BSE-8B

Submitted To:
Sir Muhammad Ibrahim

Tasks:

We need to perform the required tasks on two machines using Ansible.

Ansible will be installed on only one machine, and from that machine, we will manage both systems.

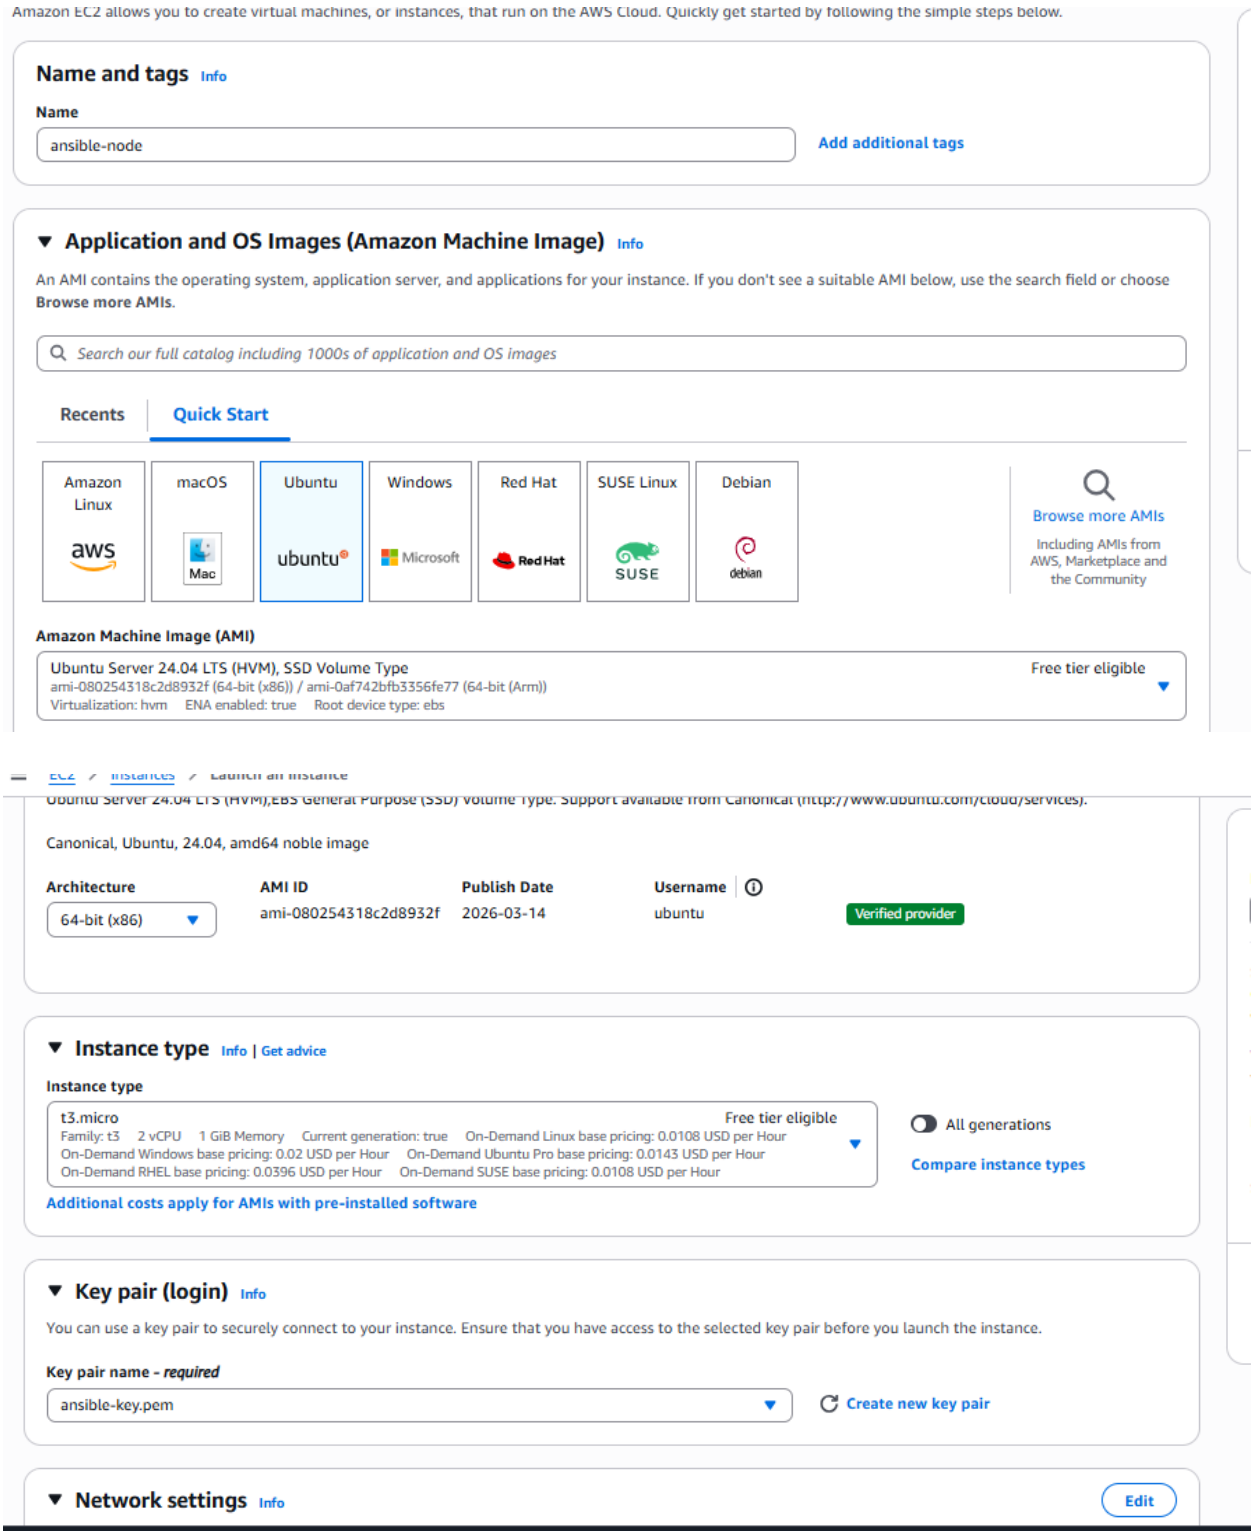

We have to run both of yesterday's tasks in a single playbook.

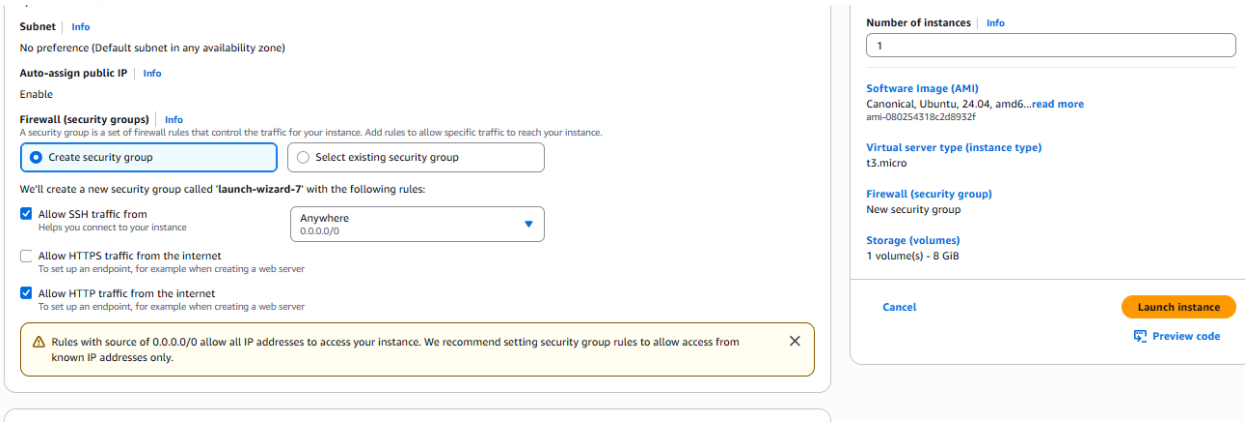

The playbook should do the following on both machines:

- **Display the CV**
- **Create the required users**

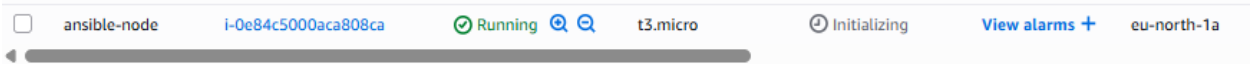

So basically, one Ansible playbook will be used to complete all tasks on both machines.

➢ Using Ansible to automate tasks on multiple machines (Local + AWS)

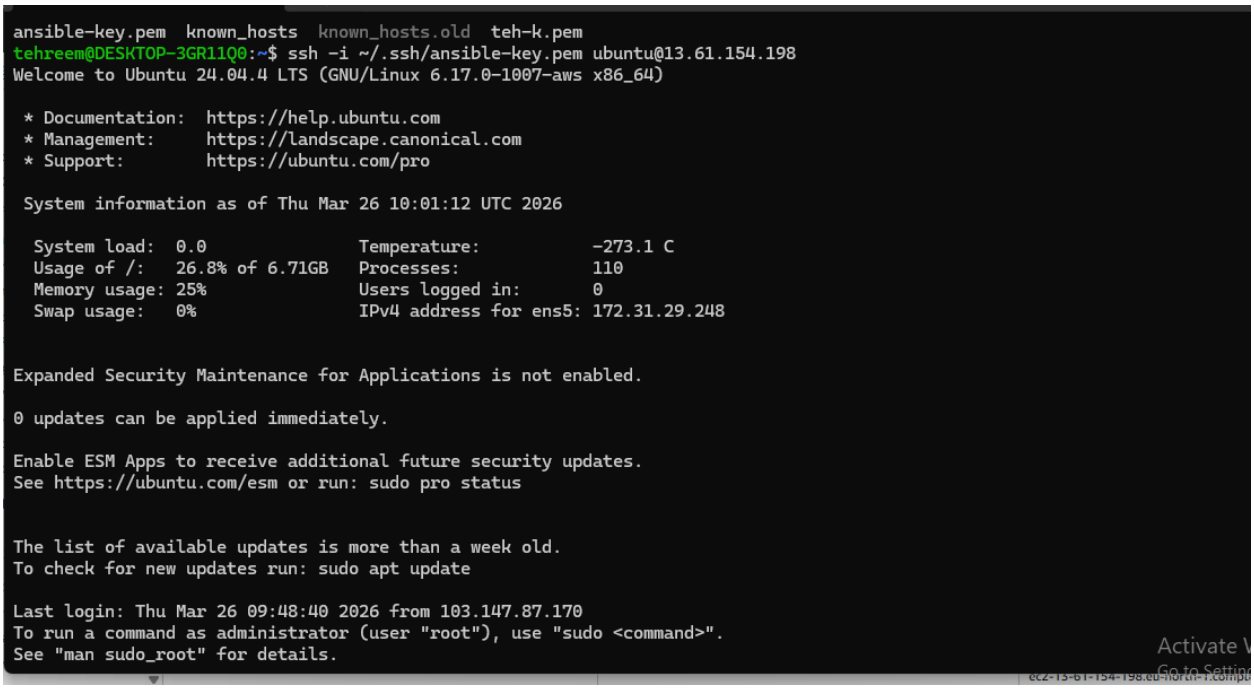

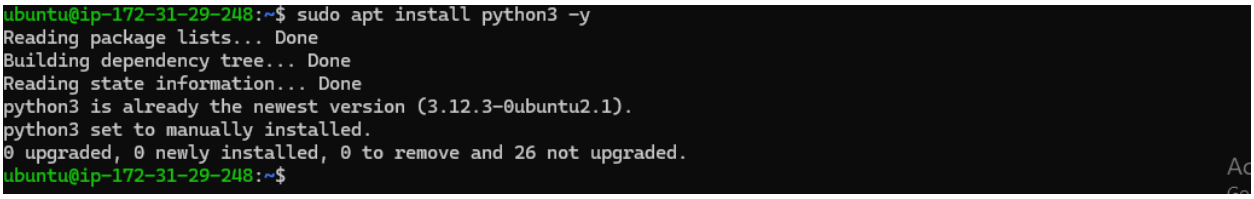

Instance is created:

Local Machine (WSL)

AWS machine ready

Inventory file update

```
tehreem@DESKTOP-3GR11Q0:~$ nano ~/ansible-tasks/hosts
```

```
  GNU nano 7.2                          /home/tehreem/ansible-tasks/hosts *
[servers]
localhost ansible_connection=local

aws ansible_host=13.61.154.198 ansible_user=ubuntu ansible_ssh_private_key_file=~/.ssh/ansible-key.pem
```

Inventory file update

```
tehreem@DESKTOP-3GR11Q0:~$ nano ~/ansible-tasks/hosts
tehreem@DESKTOP-3GR11Q0:~$ nano ~/ansible-tasks/final.yml
tehreem@DESKTOP-3GR11Q0:~$
```

```
GNU nano 7.2                          /home/tehreem/ansible-tasks/final.yml *
  - name: Copy CV
    copy:
      src: cv.html
      dest: /var/www/html/index.html

  - name: Create user1
    user:
      name: user1
      state: present

  - name: Create user2
    user:
      name: user2
      state: present
```

```
tehreem@DESKTOP-3GR11Q0:~/ansible-tasks$ ansible-playbook -i hosts final.yml --ask-become-pass
